KINDERMORGAN

COMPANY OVERVIEW

Kinder Morgan’s Central Florida Pipeline system consists of a 110-mile, 16-inch diameter pipeline that transports gasoline and batched denatured ethanol, and an 85-mile, 10-inch diameter pipeline that transports diesel fuel and jet fuel from Tampa to Orlando. The 10-inch pipeline connects to Kinder Morgan’s Taft, Florida, terminal (located near Orlando) and is the sole pipeline supplying jet fuel to the Orlando International Airport. Kinder Morgan also owns and operates liquids terminals in Tampa and Taft. The Tampa terminal contains approximately 1.6 million barrels of storage capacity for sub-octane gasoline, ultra low sulfur diesel, bio diesel, ethanol, and jet fuel, and is connected to two ship dock facilities in the Port of Tampa. The Tampa terminal also provides truck rack blending services for ethanol, neat loads of denatured ethanol and bio-diesel. The Taft terminal contains approximately 1.0 million barrels of storage capacity for sub-octane gasoline, ultra low sulfur diesel, bio diesel, ethanol, and jet fuel for further movement into trucks.

PRODUCTS/DOT GUIDEBOOK ID#/GUIDE#:
Gasoline (Sub-Octane) 1203 128
Denatured Ethanol 1170 127
Diesel (Ultra Low Sulfur) 1202/1993 128
Bio Diesel 1202/1993 128
Jet Fuel 1863 128

FLORIDA COUNTIES OF OPERATION:
Hillsborough Orange
Osceola Polk

Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.

COMMITMENT TO HEALTH, SAFETY & ENVIRONMENT

Kinder Morgan is committed to public safety, protection of the environment, and operation of its facilities in compliance with all applicable rules and regulations. The Central Florida Pipelines fall under the regulatory oversight of the U.S. Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA). The company is proud of its safety record and follows many regulations and procedures to monitor and ensure the integrity of its pipelines.

Pipeline operating conditions are monitored 24 hours a day, 7 days a week by personnel in control centers using a Supervisory Control and Data Acquisition (SCADA) computer system. This electronic surveillance system gathers such data as pipeline pressures, volume and flow rates and the status of pumping equipments and valves. Whenever operating conditions change, an alarm warns the operator on duty and the condition is investigated. Both automated and manual valves are strategically placed along the pipeline system to enable the pipeline to be shut down immediately and sections to be isolated quickly, if necessary. We want you to be aware of our pipelines. We ask for your help in preventing accidental damage to pipelines. Kinder Morgan supports the Nation’s Homeland Security efforts and Kinder Morgan encourages you to immediately notify and report any suspicious persons and/or activities near the pipeline to your local law enforcement authorities by calling 911.

WORKING TOGETHER TO PROTECT PIPELINES & RIGHT-OF-WAYS

In addition to 24-hour monitoring and ongoing safety and security procedures, Kinder Morgan relies on you, the local emergency responder, to notify Kinder Morgan when you observe potential right-of-way restriction violations or potential damage to our facilities, which could endanger public safety. We support your enforcement of “Call Before You Dig” requirements in states where they apply.

Excavation activity is the most common cause of serious pipeline damage. In most states, residents, excavators and farmers are required by law to call 811 or their local One-Call center at least two or three working days before starting an excavation project to have underground utilities marked. Refer to your state-specific One-Call laws for more information.

Unauthorized use, such as building or planting, in the pipeline right-of-way is known as encroachment. Kinder Morgan regularly conducts maintenance to trim trees and remove shrubs or structures that prohibit the company from clearly viewing the pipeline corridor during aerial or foot patrols and regular maintenance activities.

Please contact us if you know of places where trees, plants or structures are located on the pipeline right-of-way or if you see individuals digging in areas where underground utilities are not marked with flags.

SIGNS OF A PETROLEUM PIPELINE LEAK OR RUPTURE

The following are indications of a possible pipeline leak:

• Brown or discolored vegetation amid healthy plants
• Dirt being blown into the air
• Colorful sheens on water surfaces
• Fire at or below ground level
• Stains or pools of hydrocarbons not usually present in the right-of-way
• Bubbles coming from bodies of water
• A loud roar or hissing sound
• Distinctive petroleum type odors

On occasion, a pressure-relieving device may activate at a CO2 aboveground pipeline facility. These devices are acting as designed to relieve pressure on the system to prevent over pressurization. Under no circumstances should a pressure relieving device be capped or valved off.
PIPELINE INCIDENT RESPONSE TACTICS
The list below summarizes emergency response tactics to implement when you respond to a pipeline incident.

1. Assess the situation
   • Approach with caution from upwind location.
   • Isolate and secure the area.
   • Employ ICS.
   • Identify hazards.
   • Identify and contact the pipeline operator using the emergency number listed on the pipeline marker.

2. Protect people, property & the environment
   • Establish isolation zones and set up barriers.
   • Rescue and evacuate people (if needed).
   • Eliminate ignition sources.
   • Stage apparatus and equipment based on atmospheric monitoring and weather conditions.
   • If liquid products are involved, use appropriate defensive Hazardous Waste Operations & Emergency Response (HAZWOPER) procedures such as installing dikes and dams, if trained and equipped.
   • Control fires, vapor and leaks. Do not extinguish burning fires. Protect exposures and coordinate isolation operations with pipeline personnel.
   • Do not operate (open or close) valves or other pipeline equipment.
   • Employ containment techniques if personnel are trained, equipped and it is safe to do so.
   • Designate a safe location for bystanders and the media.

3. Call for assistance as needed
   • Contact your local emergency response organization and/or national resources if needed.

BASIC PIPELINE INFORMATION
Kinder Morgan’s pipelines are typically underground, but they are located aboveground in select climates and at compressor stations, pumping stations, valve sites and terminals.
Kinder Morgan operates pipelines in your community. Pipeline’s are the backbone of our nation’s energy transportation infrastructure. According to the National Transportation Safety Board, pipelines are the safest mode of fuel transportation, both for the public and the environment.
Pipelines are constructed in a corridor of land called the pipeline right-of-way that includes the land over and around the pipeline, typically 25 feet on each side. Right-of-way agreements limit how the corridor is used to protect the pipeline and allow operators to monitor and inspect the pipeline.

Kinder Morgan monitors its pipeline system 24-hours a day from its state-of-the-art System Control Center. We ensure public safety and safe pipeline operations through employee training, regular testing, aerial and right-of-way foot patrols and adherence to our comprehensive Integrity Management plan and procedures.

There are three primary types of pipelines: gathering, transmission and distribution. Gathering pipelines transport CO2 and petroleum products from the wellhead and production areas to processing facilities. Transmission pipelines, like those operated by Kinder Morgan, transport CO2 and hazardous liquids to marketing and distribution terminals. Transmission pipelines are typically large, high-pressure pipelines.
Distribution systems for hazardous liquids differ. Liquids products are stored and transported to their final destination by tanker trucks.

LOCATING PIPELINES IN YOUR COMMUNITY
Pipeline markers are located along the right-of-way, at road intersections, waterways, railroad crossings and all aboveground facilities. These signs identify the general area but not the exact location of the pipeline. They specify the type of product transported, the operator’s name and emergency contact number.

The federal government provides access to maps of transmission pipelines in your community through the National Pipeline Mapping System at www.npms.phmsa.dot.gov. Government and safety officials can access additional information and download electronic files to import into emergency preparedness GIS mapping systems.

Examples of Kinder Morgan pipeline markers
POTENTIAL HAZARDS ASSOCIATED WITH PIPELINE LEAKS

The following chart outlines potential hazards associated with the release of specific products transported by Kinder Morgan:

<table>
<thead>
<tr>
<th>Product Description</th>
<th>Physical Characteristics</th>
<th>Reactivity</th>
<th>Health Hazards</th>
<th>Fire Extinguishing Agents</th>
</tr>
</thead>
<tbody>
<tr>
<td>Denatured Ethanol-Typical</td>
<td>Colorless, water white liquid, with a mild fragrant odor</td>
<td>Flammable liquid. Keep away from heat, sparks, open flames and other ignition sources.</td>
<td>Harmful or fatal if inhaled or absorbed through skin</td>
<td>Alcohol resistant foam, dry chemical or carbon dioxide</td>
</tr>
<tr>
<td>Gasoline – Typical (Unleaded Gasoline)</td>
<td>Clear (may be dyed) liquid with a gasoline odor</td>
<td>Flammable liquid. Keep away from heat, sparks, open flames and other ignition sources.</td>
<td>Harmful or fatal if inhaled or absorbed through skin</td>
<td>Dry chemical, foam, carbon dioxide (CO2) or water fog</td>
</tr>
<tr>
<td>Bio-Diesel – Typical (petroleum hydrocarbons)</td>
<td>Clear (may be dyed) liquid with a hydrocarbon odor</td>
<td>Flammable liquid. Keep away from heat, sparks, open flames and other ignition sources.</td>
<td>Harmful or fatal if swallowed, inhaled or absorbed through skin</td>
<td>Dry chemical, foam, carbon dioxide (CO2) or water fog</td>
</tr>
<tr>
<td>Low Sulfur and Ultra Low Sulfur Diesel – Typical</td>
<td>Clear yellow liquid with a petroleum odor</td>
<td>Flammable liquid. Keep away from heat, sparks, open flames and other ignition sources.</td>
<td>Harmful or fatal if inhaled or absorbed through skin</td>
<td>Dry chemical, foam, carbon dioxide (CO2) or water fog</td>
</tr>
<tr>
<td>Turbine Fuel – Typical</td>
<td>Clear watery-white liquid with a faint hydrocarbon odor</td>
<td>Flammable liquid. Keep away from heat, sparks, open flames and other ignition sources.</td>
<td>Harmful or fatal if swallowed, inhaled or absorbed through skin</td>
<td>Dry chemical, foam, carbon dioxide (CO2), water fog or vaporizing liquid type extinguishing agents</td>
</tr>
</tbody>
</table>

For specific information about each product Material Safety Data Sheets (MSDS) can be found in this book or downloaded from Kinder Morgan’s Web site at www.kindermorgan.com/public_awareness/AdditionalInformation/msds
